Sequence 172 AA;

The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the Scytalone dehydrogenase amino acid sequence.

Claim 1; SEQ ID NO 2; 50pp; Japanese.

Gene encoding for scytalone dehydrogenase (SCDH), useful for SCDH inhibitors and evaluating sensitivity to them.

for screening

                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the Scytalone dehydrogenase amino acid sequence.

The sequences of the invention are useful for altering abiotic stress tolerance, pathogen or disease resistance or the grain quality, nutritional content or yield in a plant. The present sequence is rice disease resistance protein, LOX1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim

(II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L. pneumophila. The present squence represents the amino acid sequence of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rusniok C,

The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also used for the production of antibodies. The products can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated Helicobacter polynucleotides - used to develop products for
the diagnosis, prevention and treatment of Helicobacter infections and
gastrointestinal diseases.
                                                                                                                                                                                                                                                                                                           Bacterial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to new Proteus mirabilis polypeptides and polypucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polypucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                           lung fibrosis; skeletal disorder; platelet disorder; cell proliferation; transplant rejection; acquired immune deficiency syndrome; AIDS; wound; connective tissue disease; drug screening; ulcer; liver fibrosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, carquired immune deficiency syndrome (AIDs), transplant rejection, allergy, infection, inflammatory disorder, arthritis, haematopoietic disorder, skin disorder (keloid), restenosis, neurological disease, compared to the disorder section, restenosis, neurological disease, and cardiovascular disorders such as diabetes mellitus, atherosclerosis, cerebral thrombosis or haemorrhage, and other diseases, including cerebral thrombosis or haemorrhage, and other diseases, including hypertension, hypothyroidism, myeloid or lymphoid cell deficiencies and rarious platelet disorders such as thrombocytopaenia. Wmi-7B-like protein compared to useful for cell proliferation, tissue repair and in the treatment of burns, incisions and ulcers, periodontal disease and treatment of lung or liver fibrosis. Wmi-7B-like protein plays an important role in continuation of tumour growth, chemoresistance, radiotherapy resistance and also for screening drugs. Wmi-7B-like nucleic acids are useful in gene therapy. The present sequence is murine Wmi-7B protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                             growth of a neuron, a pharmaceutical composition for modulating growth of a neuron in a mammal (comprising a Wnt, a Wnt-like substance, or a chemical compound affecting a Wnt signaling pathway and a pharmaceutical preparation suitable for delivery to the mammal) and a method of inhibiting growth of a neuron in a subject. The neuron is a neuron in a spinal cord that has been damaged by traumatic spinal cord injury. Inhibiting growth of a neuron in a subject comprises providing a composition (comprising a secreted frizzled-related protein (sFRP), sFRP-like substance, Ryk or Ryk-like substance and a pharmaceutical preparation suitable for delivery to the subject and administering the composition to the subject. sFRP and Ryk are both proteins that bind to block the activity of Wnt. The method is useful for modulating growth of a neuron for preparing a composition for treating spinal cord disorder, paralysis, Parkinson's disease and motor neurone disease. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to modulating growth of a neuron comprises contacting the neuron with a Wnt (wingless-type protein), a Wnt-like substance, and/or a chemical compound affecting a Wnt signaling pathway. Also included are a method for identifying a substance that modulates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modulating growth of a neuron for treating spinal cord disorder or paralysis comprises contacting the neuron with a Wnt, a Wnt-like substance, and/or a chemical compound affecting a Wnt signaling pathway.
                                                                                                                                                                                                                                                                   Sequence 349

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC the cell with a composition comprising an agent that acts at the cell with a composition comprising an agent that acts at the cell with a consposition comprising an agent that acts at the cell composition composition composition to promote cell where the cell is contacted with an amount of the composition to promote composition to adult cardiac cell proliferation and/or regeneration. Also described: (1) treating a condition having cardiac cell injury or death; (2) treating a developmental disorder of cardiac cell; and (3) a conditied polypeptide comprising a Wnt-related polypeptide or bioactive fragment, where the modified Wnt-related polypeptide or bioactive fragment, where the modified Wnt-related polypeptide or bioactive fragment, where the wnt promoting cardiac cell proliferation and/or regeneration, where the Wnt propertide or bioactive fragment is useful in the manufacture of a medicament for promoting cardiac cell proliferation and/or regeneration, where the Wnt propertide or bioactive fragment is modified with one or more moieties to produce a conditied wnt polypeptide or bioactive fragment. The method is useful for composition meanufacture fragment. The method is useful for cell injury or death, e.g. myocardial infarction, atherosclerosis, cell injury or death, e.g. myocardial infarction, atherosclerosis, coronary artery disease, obstructive vascular disease, dilated coronary artery disease, obstructive vascular disease, valvular heart cell repetiting from cancer or cancer related conditions such as structural ceropresents mouse wnt7B, which is used in the exemplification of the ventral invention. Mouse wnt7B is located on chromosome 15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

or

plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the invention.

Sequence 411 AA;

New Wnt-7B-like polypeptides and polynucleotides for diagnosing, preventing and treating broad range of pathological states such as cancer, hematopoietic, inflammatory, skin, skeletal disorders and atherosclerosis.

Claim 12; Fig 2A; 115pp; English.

Alzheimer's disease, trauma, wound, spinal cord injury, skeletal disorder and cardiovascular disorders such as diabetes mellitus, atherosclerosis, cerebral thrombosis or haemorrhage, and other diseases, including hypothyroidism, myeloid or lymphoid cell deficiencies and various platelet disorders such as thrombocytopaenia. Wnt-7B-like protein is also useful for cell proliferation, tissue repair and in the treatment of burns, incisions and ulcers, periodontal disease and treatment of lung or liver fibrosis. Wnt-7B-like protein plays an important role in autocrine stimulation of tumour growth, chemoresistance, radiotherapy resistance and also for screening drugs. Wnt-7B-like nucleic acids are useful in gene therapy. The present sequence is human Wnt-7B-like protein which is obtained from clone 29518614.0.61 The invention relates to human Wnt-7B-like protein and its cDNA molecule. Human Wnt-7B-like proteins and their nucleic acids are useful for treating and preventing Wnt-7B-like-associated disorders such as neoplasia, cancer, e.g., colorectal carcinoma, prostate cancer, immune disorder, autoimmune diseases, such as connective tissue disease, multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, acquired immune deficiency syndrome (AIDS), transplant rejection, allergy, infection, inflammatory disorder, arthritis, haematopoietic disorder, skin disorder (keloid), restenosis, neurological disease,

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
